

App Name: Smart Homestay Review Analyzer

One-Line Pitch: A web application that helps homestay owners understand guest reviews using AI and improve their services based on customer feedback.

Target User: This app is designed for homestay owners and managers who receive many guest reviews online. Reading and analyzing every review can be time-consuming, so this tool helps them quickly understand what guests liked, what problems they faced, and where improvements are needed.

Core Features:

- **Review Collection:** Store and manage guest reviews from different platforms in one place.
- **Sentiment Analysis:** Analyze reviews and classify them as positive, negative, or neutral.
- **Rating Dashboard:** Show overall ratings and review trends through simple charts and statistics.
- **Complaint Detection:** Identify common issues related to cleanliness, food, service, location, or facilities.
- **Report Generation:** Create summary reports that highlight important feedback and suggestions.

AI Feature: The app will use the OpenAI API to analyze guest reviews and determine their sentiment. It will also identify common topics and complaints from the reviews and generate short summaries of customer feedback. OpenAI is a suitable choice because it provides reliable natural language processing capabilities and can understand customer opinions with high accuracy.

Tech Stack:

- Frontend: React.js
- Styling: Tailwind CSS
- Backend: Express.js
- Database: MongoDB
- Authentication: JWT Authentication
- Deployment: Vercel (Frontend) + Render (Backend)
